PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3+ years of expertise building scalable fintech and blockchain systems. Experienced leading small engineering squads, architecting low-latency microservices, and delivering mission-critical web applications featuring real-time data visualization and complex third-party API integrations.

SKILLS SUMMARY

- **Languages:** Rust, Typescript, JavaScript, SQL, Bash
- **Frameworks:** React, Nextjs, TensorFlow, NodeJS, Bun
- **Tools:** Kubernetes, Docker, GIT, PostgreSQL, MySQL
- **Platforms:** Linux, Web, Windows, AWS,
- **Soft Skills:** Leadership, Event Management, Writing, Public Speaking, Time Management

EXPERIENCE

- **Backend Developer, Taja** Lagos
Nov 2024 - Present
 - **Abuse Detection:** Implemented device fingerprinting and abuse-detection controls to identify impersonation attempts, reducing account takeover incidents by 30%.
 - **Code Review Workflows:** Built monitoring and review workflows that supported code review cadences and mentorship sessions, improving engineering team delivery consistency and code quality.
 - **Query Optimization:** Optimized SQL queries and database indexes to reduce average database request latency by 20%.
 - **Admin Dashboard:** Developed an admin dashboard for internal operations workflows, helping increase organizational productivity by 50% through faster task handling and reporting.
- **Software Engineer (contract), Kite** Lagos
Oct 2025 - May 2026
 - **Unified API Layer:** Architected a unified API layer around major payment providers, consolidating complex financial rails into a single high-performance interface used by multiple client applications.
 - **Team Leadership:** Led a team of 2 engineers, defining the technical roadmap, code-review standards, and quarterly planning process while maintaining 99.9% system uptime.
 - **Regression Testing:** Introduced automated regression testing across critical payment flows, cutting production bug escapes by over 50% in the first quarter.
 - **Cross-Platform Frontend:** Co-developed the cross-platform mobile frontend, implementing state management and real-time synchronization with the unified backend API.
 - **UI Components:** Translated financial data flows into responsive UI components, improving onboarding and transaction completion experiences for users.
- **Software Engineer, LocalRamp** Lagos
May 2023 - Nov 2024
 - **Fiat-to-Crypto Gateway:** Led end-to-end development of a fiat-to-crypto gateway processing millions in monthly transaction volume, with PCI-DSS compliance and KYC/AML integration.
 - **Analytics Dashboard:** Built a real-time analytics dashboard for operations teams and an embeddable widget adopted by 300+ enterprise clients, contributing to an 18% improvement in retention.
 - **CI/CD Optimization:** Reduced CI/CD pipeline duration by 70% by streamlining build and deployment stages, and authored API design standards that cut new engineer onboarding time by 40%.

PROJECTS

- **RateLimitr (TypeScript, Fastify, Redis, TimescaleDB) – 2024:** Distributed rate-limiting service with 4 pluggable algorithms and atomic Redis Lua operations — 10,000+ RPS with zero race conditions across 50+ nodes. Multi-tenant architecture for 10,000+ concurrent tenants with hot-swappable strategies and TimescaleDB-powered real-time analytics.
- **Synapse (TypeScript, Express, MongoDB, Redis):** Architected a provider-agnostic Strategy/Adapter pattern unifying 3 payment providers behind a single IProviderAdapter interface — enabling hot-swappable provider integration without client code changes. Built a multi-tenant API handling virtual accounts, cards, KYC/KYB, cross-border payouts, and currency swaps across 6+ external financial services with workspace-scoped isolation. Implemented event-driven background processing via RabbitMQ consumers and Bull queues for async email delivery, virtual account creation, and scheduled exchange rate updates. Designed a layered architecture with JWT/API-key auth, rate limiting, structured logging (Winston), Sentry error tracking, and S3-compatible file storage — processing millions in transaction volume.

EDUCATION

- **Federal University Ndufu-Alike** Ebonyi, Nigeria
Bachelor of Science - Computer Science; GPA: 3.4 Jan 2021 - Oct 2025
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases
